## SUBJECT

DISPOSITION OF ROOM 141 IN BUILDING 771

Nuclear Materials Safeguards Procedure Manual, Section 10-10 states that all waste placed into waste boxes must first be placed in white waste drums and drum counted to determine the nuclear material content. The only exception to this is large pieces of metal such as glovebox sections. Exception to this procedure will be granted on an individual basis by NMA and Safeguards measurements.

All strip out activities must be pre-arranged with Quality Waste Certification, Radiation Monitoring, Waste Operations, Nuclear Materials Safeguards, and Traffic Departments.

Ken Peters
